

Halo: what to do

Where we are: 0 downloads from strangers in the last 30 days (the 1 was your husband). But 89% of Reel views are strangers, so the content does reach new people. There just isn't enough of it yet, and too few people tap through.

Every week (about 2 hours)

- Post twice a week. Reels if you can, a carousel only if you can't (Reels are what reach new people).
- Film once every other Sunday: 4 short clips of Angel and the app. I edit, caption and add hashtags.
- One blog post a week, on the same topic as that week's posts. I write it, you approve and publish.
- 10 minutes a day: reply to comments. Stop following people to get followers.

Do this week

- Change the Instagram bio to: "Free breathing rate counter + meds tracker for pets with heart disease."
- Pin your best Reel (resting breaths) to the top of the profile.
- Ask friends and family who have the app to leave an App Store rating.
- Accept Apple's updated developer agreement in App Store Connect.
- Send the follow-up email to the cardiologists (draft is ready).
- Let me add the Smart App Banner to the website (5 minutes).
- Approve the first blog post and the first 2 posts I write.

Blog order

1. Why is my cat breathing fast while asleep?
2. What is a normal sleeping breathing rate for a cat with heart disease?
3. A free printable breathing rate log
4. Heart murmur in cats: what it means

Email

- Send one follow-up to everyone who has not replied, then stop.
- Hold the international batch until you see how the UK one goes.
- Optional: 2 or 3 short pitches to local papers ("Woman builds app for her cat with four heart conditions").
- Optional: a small QR card at Medivet Oxted and Freer Farm.

Not doing

- No Facebook groups or Reddit.
- No three posts a week.
- No mass emailing the Medivet list.

Every Sunday (10 minutes)

- Write down: Reel views, profile visits, link taps, App Store downloads.
- Whichever post got the most shares and saves, make more like it.

Still to check

- Screenshots of TikTok and Facebook numbers.
- Cloudflare top pages, to see if the blog is being read.
- Search the App Store for "cat breathing rate" and see if Halo shows up.
